Rishi Shrivastava

Responsibilities:

- UI development using Angular, Redux.
- SSR support using Node.js.
- Getting requirement directly from the client owner.
- Grooming
- Refinement
- Features development including unit testing (Feature driven development approach)
- Code Review
- Deployment & Support

Hexaware Technologies Ltd.

Nov 2017 – Sep 2019

➔ Software Engineer

SNAPP Rewrite

Single Network Application (SNAPP) is a project to create a common tool that enables agents in the support of all airport activities. This will be an encompassing application for all the different types of airports, both proprietary and common use. The application will assist in guiding the agents on the processes they need to complete at the airport using an interface. This interface will eliminate the use of native Deltamatic by agents at the airport in the different functional areas. The use of enterprise solutions will be incorporated to allow for maintainability and re-use of common elements across functions.

Responsibilities:

- Created API using Rest web services in MVC architecture.
- Implemented SPA using Angular Router Application data flow using Redux.
- Implemented Spring Boot framework.
- Experience in upgrading the system as per the requirement of client with coordination of R&D team.
- Experience in testing for the new features release and writing Junit test cases.
- Designed responsive UI with Angular 6 material design, HTML5/CSS taking Figma screens provided by client into reference.
- Frontend optimization via customized Lazy Loading of user notifications.
- Clear understanding of Software Development Life Cycles (SDLC).
- Collaborating with developers across multiple teams to develop and build common re-usable application components.
- Implemented NGRX store for better experience.
- I have been part of code refactor team where I have optimized the existing code to make it more understandable and reusable.
- Worked in Agile environment.
